## Question:

Find the coordinates of a point **A** where AB is a diameter of the circle with centre  $(-2, 2)$  and **B** is the point  $(3, 4)$

## Solution:

Let the point **A** be  $(x, y)$ .

Since AB is the diameter with centre of circle being  $(-2, 2)$ ,

Centre of circle =  $\frac{\mathbf{A+B}}{2}$

$$\begin{pmatrix} -2 \\ 2 \end{pmatrix} = \frac{1}{2} \left( \begin{pmatrix} x \\ y \end{pmatrix} + \begin{pmatrix} 3 \\ 4 \end{pmatrix} \right) \quad (0.1)$$

$$\begin{pmatrix} -2 \\ 2 \end{pmatrix} = \frac{1}{2} \left( \begin{pmatrix} x \\ y \end{pmatrix} + \begin{pmatrix} 3 \\ 4 \end{pmatrix} \right) \quad (0.2)$$

$$2 \cdot \begin{pmatrix} -2 \\ 2 \end{pmatrix} = \begin{pmatrix} x \\ y \end{pmatrix} + \begin{pmatrix} 3 \\ 4 \end{pmatrix} \quad (0.3)$$

$$\begin{pmatrix} -4 \\ 4 \end{pmatrix} = \begin{pmatrix} x+3 \\ y+4 \end{pmatrix} \quad (0.4)$$

$$-4 = x + 3 \quad (0.5)$$

$$x = -4 - 3 = -7 \quad (0.6)$$

$$4 = y + 4 \quad (0.7)$$

$$y = 4 - 4 = 0 \quad (0.8)$$

Therefore, the coordinates of point **A** are  $\boxed{(-7, 0)}$ .
